

Thread & Core

S Y S T E M S

COMPANY PROFILE

Enterprise Architecture for the Connected Enterprise.

Connecting Every Thread to the Core.

THREADANDCORE.COM · PUNE, INDIA

Technology doesn't transform businesses.

Connection does.

Every enterprise runs on invisible threads: processes, applications, data, people, and intelligence. We help connect those threads to the core, creating systems that scale, adapt, and endure.

THAT IS WHY THREAD & CORE EXISTS.

02 — WHAT WE DO

The core systems we architect.

From ERP foundations to AI-enabled workflows, we design the operating layer that connects your enterprise — modernising, integrating, automating, and scaling the systems that run daily operations.

01 ERP Extensions & Enterprise Integration

Extensions, workflows, and side-by-side applications on a clean ERP core — plus the APIs and middleware that connect them.

SAP BTP · CAP · Fiori/UI5 · S/4HANA · Clean Core · Integration Suite

02 AI & Intelligent Automation

Forecasting, copilots, RAG, and workflow automation, deployed where they remove real work and engineered to survive production.

SAP AI Core · GenAI · RAG · Forecasting · Automation

03 Full-Stack Enterprise Platforms

Web and mobile platforms teams run the business on — offline-first, multilingual, and secured for enterprise use.

React · Node.js · MongoDB · Mobile · Offline-first

04 Data & Analytics

Live enterprise data turned into dashboards and decision intelligence — system health, process visibility, migration readiness.

HANA Cloud · SAP Analytics Cloud · CAP · ABAP

05 Planning & Solution Architecture

Ecosystem study, DPRs, and functional specifications that make delivery predictable — then built by the same team that planned it.

Ecosystem Study · DPR & Feasibility · Functional Specs · Solution Architecture

03 — THE FRAMEWORK

A method built from real enterprise delivery.

Five phases. One continuous method. The same methodology on every engagement, from a single extension to a multi-region enterprise programme.

- | | | |
|----|-------------------|--|
| 01 | Understand | <i>What cannot fail?</i>
Decode the business core. |
| 02 | Connect | <i>Where are the gaps?</i>
Map the enterprise threads. |
| 03 | Modernise | <i>What must be rebuilt?</i>
Strengthen the architecture. |
| 04 | Automate | <i>What should run without humans?</i>
Introduce intelligence. |
| 05 | Scale | <i>Can it survive change?</i>
Build resilient enterprise systems. |

04 — THE TRACK RECORD

The experience behind the practice.

Every system referenced below was architected and delivered by our founder — through senior enterprise roles and independent product builds — before Thread & Core existed. This is not the company’s client portfolio; it is the proven delivery experience the practice is built on, and what every new engagement starts with.

OBJECTS CLASSIFIED

SELECTED ENGAGEMENTS

Field Operations Intelligence Platform	Mining & Explosives — global field operations
PO-to-SO Automation Pipeline	Manufacturing & Supply Chain
CareFlow	Healthcare — independent US medical practices
AyurVaidya	Ayurveda Hospitals & AYUSH Institutions
Clean Core Assessment Dashboard	Enterprise Analytics
StockSense AI	Supply Chain Intelligence

The architect behind Thread & Core Systems.

The architect who scopes your project is the one who builds it.

Thread & Core is led by Prashant Agarwal, an SAP-certified BTP Solution Architect with 14+ years of enterprise technology delivery across SAP BTP, Clean Core extensions, AI-driven enterprise systems, cloud architecture, integration, and production-scale applications.

The practice exists because of one belief, proven across every engagement: technology doesn't transform businesses — connection does. Systems succeed when the people who understand the business problem also own the architecture, and stay accountable through delivery.

That is the model here. No handoff from a senior architect to an anonymous delivery team. The person who scopes the system designs it, the person who designs it builds it, and the person who builds it answers for it in production.

CERTIFIED	SAP Certified Associate — Backend Developer (CAP); SAP Certified Associate — Fiori Application Developer; SAP Instructor — BTP100 & CLD200
FOCUS	Full-spectrum enterprise tech — SAP BTP, AI, cloud, full-stack
ONSITE	Delivered in Australia, Germany & India
EXPERIENCE	14+ years of enterprise technology delivery
INDUSTRIES	Mining • Manufacturing • Oil & Gas • Healthcare • HR • Analytics

START A CONVERSATION

Tell us how your business runs. We'll tell you what to build.

We are not taking every engagement. We are taking the right ones — where architecture can create real leverage and the client wants a peer, not a vendor.
