

Enterprise Architecture for Connected Business Systems

We connect ERP, applications, data, automation, and AI into systems that run the business with clarity, scale, and ownership.

What we help you do Modernize the enterprise core without creating fragmentation around it.	How we work Founder-led architecture and delivery. The architect who scopes the work stays accountable for the build.
Primary strengths SAP BTP, Clean Core, CAP, Fiori/UI5, integrations, AI-enabled workflows, full-stack enterprise apps.	Ideal engagements Complex processes, disconnected applications, ERP extensions, workflow automation, and practical AI adoption.

Prashant Agarwal | Founder and Enterprise Architect

What Thread & Core does

Thread & Core is an enterprise architecture and technology consulting company built for businesses that need their processes, applications, data, and AI initiatives to work as one connected operating system.

The company helps leaders design, build, and modernize business systems around the digital core: ERP, master data, workflows, integrations, analytics, and the applications people use every day.

Clear services, without the metaphor

ERP Extensions and Clean Core SAP BTP, CAP, Fiori/UI5, side-by-side extensions, and clean-core modernization.	Enterprise Integration APIs, events, middleware, BTP Integration Suite patterns, and application-to-application connectivity.
Workflow and Automation Process automation, approvals, PO-to-SO flows, operational apps, and task orchestration.	AI and Data Intelligence Practical AI, GenAI, RAG, vector search, analytics, and decision-support experiences.
Full-stack Enterprise Applications React, Node.js, MongoDB, HANA Cloud, cloud-native apps, portals, and dashboards.	Architecture Advisory Discovery, solution design, architecture reviews, technical roadmaps, and delivery governance.

The Thread & Core Framework

A pragmatic delivery framework for moving from scattered systems to connected enterprise architecture.

1. Understand

Map processes, systems, users, data flows, pain points, and value leakage.

2. Connect

Define the architecture that links ERP, applications, integrations, workflows, and data.

3. Modernize

Build clean, scalable extensions and user experiences without damaging the enterprise core.

4. Automate

Use automation and AI where they remove real operational friction, not as decoration.

5. Scale

Operationalize the solution with governance, documentation, monitoring, and adoption support.

Why founder-led delivery matters

In many technology engagements, the person who understands the business problem disappears after the sales or design phase. Thread & Core is intentionally different: the architecture, implementation choices, and production outcome stay connected through one accountable technical owner.

Built from enterprise delivery experience

Thread & Core is backed by 14+ years of enterprise architecture and delivery experience across SAP, cloud platforms, full-stack engineering, automation, and AI-enabled business systems.

Global field operations platform

Architecture and delivery experience across field operations, multilingual UX, mobile workflows, and enterprise-scale rollout patterns.

Procurement-to-sales automation

Automated document-to-order flows that reduce manual work and improve accuracy across commercial operations.

Healthcare and service platforms

Workflow-led applications for care, appointments, operational visibility, and customer-facing digital experiences.

AI-enabled business tools

Solutions combining OCR, GenAI, vector search, analytics, and decision support for practical enterprise use cases.

Note: selected examples represent founder-led experience from previous roles and independent product builds. Client and employer names are withheld where confidentiality applies.

Credentials and strengths

SAP and enterprise architecture

SAP-certified BTP Solution Architect; SAP CAP, Fiori/UI5, SAP Build, SAP AI Core, Joule, HANA Cloud, S/4HANA, Clean Core.

Engineering and AI

React, Node.js, MongoDB, APIs, cloud-native systems, automation, GenAI, RAG, vector search, and analytics.

Enablement

SAP instructor experience across BTP100 and CLD200; able to translate architecture into adoption and team capability.

Ways to start

Architecture Diagnostic 2-3 week assessment of processes, systems, integration gaps, technical risk, and high-value opportunities.	Focused Pilot A contained build for one workflow, integration, dashboard, AI assistant, or SAP BTP extension.
Modernization Roadmap A practical plan for Clean Core, SAP BTP adoption, automation, application rationalization, and phased delivery.	Build Partnership Founder-led delivery of enterprise applications, workflows, integrations, and AI-enabled systems.

The promise

We connect what matters. We build what lasts. We deliver what you need.
